## Caracteristici principale:

**CLC2000® Valva Needle-Free** - conector revolutionar ce ofera o viteza constanta a lichidelor care ies din cateter in cazul deconectarii Luer. Aceasta caracteristica previne refluxul de sange in lumenul cateterului. Minimalizind cantitatea de sange in lumen are ca efect reducerea formarilor de cheaguri .

**Ac de punctionare Y Seldinger (introductor)** - Acul de punctionare in Y al producatorului Biometrix ofera un design unic care permite accesul la vena fara a deconecta seringa atasata la ac. Acul are o valva integral pentru a preveni riscul scurgerii de sange si aparitiei embolismului in timpul insertiei cateterului.

**Ghid “ Special Kink Resistant”** - acest ghid conductor este fabricat pentru a rezista unghiurilor ascutite fara a se indoi si infasura , astfel facilitand trecerea cateterului prin vasculatura pacientului.
